botrocetin alpha chain - jararaca
N'Alternate names: two chain botrocetin alpha chain
C'Species: Bothrops jararaca (jararaca)
C'Species: Bothrops jararaca (jararaca)
C'Date: 21-Sep-1993 #sequence_revision 18-Nov-1994 #text_change 15-May-1998
C'Accession: A47267; B37958
C'Accession: A47267; B37958
A'Y: Suzuki, M.; Ozeki, Y.; Nishio, K.; Fukui, H.; Titani, K.
Proc. Natl. Acad. Sci. U.S.A. 90, 928-932, 1993
A'Fitle: Primary structure of two-chain botrocetin, a von Willebrand factor modulator phase and a structure of two-chain botrocetin, a von Willebrand factor modulator phase and a structure of two-chain botrocetin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A,Accession: B47267

Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).
-!- FUNCTION: Plays a role as a receptor for the recognition of MHC class I HLA-E molecules by NK cells and some cytotoxic T-cells.
-!- SUBUNIT: Can form disulfide-bonded heterodimer with NKG2 family
                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=98267245; PubMed=9601951;

"Selection of cDNAs encoding putative type II membrane proteins on the cell surface from a human full-length cDNA bank.";
Gene 228:161-167(1999).
                                                                                                                                                                                               Hamann J., Montgomery K.T., Lau S., Kucherlapati R., van Lier R.A.W., "ALCL, a new activation induced antigen encoded by the human NK gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- SUBCELIULAR LOCATION: Type II membrane protein (Probable).
-!- TISSUE SPECIFICITY: Expressed preferentially in lymphoid tissues, and in most hematopoletic cell types.
-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)

"Rhodocetin, a novel platelet aggregation inhibitor from the venom of calloselasma rhodoseroma (Malayan pit viper): synergistic and noncovalent interaction between its subunits.";

Biochemistry 38:7584-7593(1999).

- FUNCTION: A potent inhibitor of collagen-induced platelet aggregation. Individually, neither subunit inhibits platelet aggregation. Both subunits are essential.

- SUBUNIT: Heterodimer of one alpha and one beta subunit held
                                                                                                                                                                                                                                                                  31 HRPCVSYL-VMVALGLLTVILMSLLLYQRTLCCGSKGFMCSQCSRCPNLWMRNGSHCYYF

"The CDNA cloning and molecular characterization of a snake venom platelet glycoprotein Ib-binding protein, mamushigin, from Agkistrodon halys bromhoffii venom.",
Thromb. Haemost. 79:1199-1207(1998).
-- FONCTION: Binds to platelet glycoprotein Ib and enhances platelet aggregation at low-shear stress. At high-shear stress, aggregation is inhibited.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              39 VMVALGLLIVILMSLLLYQRTLCCGSKGFMCSQCSRCPNLWMRNGSHCYYFSMEKRDWNS

Struct. Biol. 4:438-441 (1997).

-!- FUNCTION: Anticoagulant protein which binds with factor IX and factor X in the presence of calcium with a 1 to 1 stoichiometry.
-!- SUBUNIT: Heterodimer of Chains A and B; disulfide-linked.
-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANBOUS: Calcium is required for ligand binding.
-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COAGULATION FACTOR IX/FACTOR X-BINDING PROTEIN B CHAIN.

Structure 10:943-550(2002).

- FUNCTION: Two-chain botrocetin forms an activated complex with rwo-chain botrocetin forms of platelet gglutination.

- FUNCTION: There are two distinct forms of the von Willebrand factor-dependent platelet coagglutinin. The dimeric form is 34-times more active than the one-chain botrocetin in promoting vWF binding to platelets.

- SUBDINIT: Disulfide-linked dimer of an alpha and a beta chain.

Botrocetin and vWF form a soluble complex.

- SUBCELIULAR LOCATION: Secreted.

- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      platelets.";
Thromb. Haemost. 79:609-613(1998).
-!- FUNCTION: Binds to platelet GPIb/IX receptor system and stimulates
agglutination.

                             pure control of the Complex Control of the von Wilebrand factor dependent platelet coagglutination.

-!- FUNCTION: There are two distinct forms of the von Wilebrand factor dependent platelet coagglutinin. The dimeric form is 34-times more active than the one-chain botrocetin in promoting vWP binding to platelets.

New polypeptide having a sequence corresponding to human mast cell function-associated antigen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic
                                                       120
                                                                                                               180
                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of rat mast cell function-associated antigen (MARA), a type II membrane glycoprotein found on mast cells and basophilas. The invention relates to cloning of the human MARA molecule (see AAW88265) and to the discovery of splice variants (see AAW88266-67) of human MARA that are not found in rat. Polypeptides and synthetic and polynucleotides neceding them, can be used in methods for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), and tumour growth

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MARA) ligand on a target cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MARA from binding to MARA tigand and a pharmaceutically acceptable excipient. The invention is cueful for inhibiting an NK- or T-cell-expressed cell surface MARA binding to a ligand on a target cell. by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition and amount sufficient to inhibit cell surface MARA binding to the ligand on the target cell. The agent or the composition is useful for treating a newour by stimulating the cyctoxic activity of an NK cell- or a cytotoxic T-cell (CTL), where the tumour comprises an NK cell- or TL-susceptible tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is rat MARA protein

to the subject, to NK or T-cell or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating a tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic T-cell (CTL), where the tumour comprises an NK cell or CTL-susceptible tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is mouse MAFA protein
                                                                                                                                                                                                                                                                                                                                                                                                                          CGGSKDSTCSHCPSCPIIMTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQGVK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MAFA) ligand on a target cell, and prevents or inhibits natural killer (NK)- or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition

Truncated MAPA polypeptides including huMAFA(B3/4-), and polynucleotides encoding them, as well as synthetic peptides (see AAW88258-64, AAW88268-72), can be used be used in compositions for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), or tumour growth
